

Revolutionary Technology. using **Metamaterials**. Powerful Sound Absorption.

Metamaterials are artificial materials that behave in ways not found in natural materials with respect to properties such as electromagnetic waves, including light.

According to the general laws of physics, to improve soundproofing performance,

- (1) the surface area of the material surface should be reduced;
- (2) the thickness of the material should be thickened; and
- (3) the mass of the material should be increased.

Contact us with your project details and we will work with you to provide the noise control result you need.
